PROJECT APPROVAL FORM – PHASE – I / II

FINAL YEAR PROJECT – B.E. COMPUTER SCIENCE AND ENGINEERING

Degree – Department	B.E – CSE
Program	☐ AIML / ☐ CS / ☐ AIDS – Batch 1 / 2
Academic Year	2026 – 2027
Year & Semester	IV & VII

2	Mohamed Abdul Baasid	ACS23004	94458 03243	mdabdulbaasid004@gmail.com
3	Rashsheetha	ACS23007	97890 47249	rakshuvasanth18@gmail.com

2. Project Title

Attack Path Risk Engine

3. Domain / Area of Work

Cybersecurity, Cloud Security, Attack Path Analysis, Cloud Infrastructure Security

4. Brief Description

The Attack Path Risk Engine extends Cartography, an open-source cloud security graph tool, to automatically discover multi-hop attack paths from exposed entry points to sensitive cloud assets. It scores each path by risk and presents findings on a dashboard, replacing manual graph queries with automated, prioritized security insights for cloud infrastructure.

5. Expected Outcome

The main deliverable is a working software extension to Cartography: an automated engine that discovers multi-hop cloud attack paths, scores each one for risk using a documented formula, and presents ranked findings through a web dashboard, validated against a seeded AWS sandbox, with Phase I delivering the core engine and Phase II the full integrated system.
